# Overview of this specification

# About this product specification

This product specification describes the performance of the manipulator or a complete family of manipulators in terms of:

- · The structure and dimensional prints
- · The fulfilment of standards, safety, and operating equipment
- The load diagrams, mounting or extra equipment, the motion, and the robot reach
- · The specification of available variants and options

The specification covers the manipulator using the OmniCore controller.

# Usage

Product specifications are used to find data and performance about the product, for example to decide which product to buy. How to handle the product is described in the product manual.

The specification is intended for:

- · Product managers and product personnel
- · Sales and marketing personnel
- · Order and customer service personnel

1.1.1 Introduction to structure

# 1 Description

#### 1.1 Structure

#### 1.1.1 Introduction to structure

#### General

The IRB 1200 is one of ABB Robotics latest generation of 6-axis industrial robot, with a payload of 5 to 7 kg, designed specifically for manufacturing industries that use flexible robot-based automation, e.g. 3C industry. The robot has an open structure that is especially adapted for flexible use, and can communicate extensively with external systems.

#### Clean room robots

xx2100002284

Particle emission from the robot fulfill Clean room class 3 standard according to DIN EN ISO 14644-1.

Clean room robots are specially designed to work in a clean room environment. According to IPA test result, the robot IRB 1200 is suitable for use in clean room environments.

Clean room robots are designed in order to prevent from particle emission from the robot. For example is, frequent maintenance work possible to perform without cracking the paint. The robot is painted with four layers of polyurethane paint. The last layer being a varnish over labels in order to simplify cleaning. The paint has been tested regarding outgassing of Volatile Organic Compounds (VOC) and been classified in accordance with ISO 14644-8.

Classification of airborne molecular contamination, see below:

Parameter			Outgassing amount			
Area (m <sup>2</sup> )	Test duration (s)	Temp (°C)	Performed test	Total detected (ng)	Normed based on 1m <sup>2</sup> and 1s(g)	Classification in accordance to ISO 14644-8
4.5E-03	3600	23	TVOC	2848	1.7E-07	-6.8
4.5E-03	60	90	TVOC	46524	1.7E-04	-3.8

Classification results in accordance with ISO 14644-8 at different test temperatures.

# 1.1.1 Introduction to structure

#### Continued

#### Hygienic

The robot has Hygienic as an option. Robots with the option Hygienic are equipped with special sealings and coatings, and a special axes 6 stainless steel body and tool flange. The protection type for robot with hygienic is Food grade lubrication, IP67, IP69k (max.30bar) on axis 6 flange.

# IP67/66 protection

The robot has IP67 as an option. The option will add sealing, machining parts and gasket.

# **Protection type Foundry Plus 2**

Robots with the option Foundry Plus 2 are designed for harsh environments where the robot is exposed to sprays of coolants, lubricants and metal spits that are typical for die casting applications or other similar applications.

Typical applications are spraying insertion and part extraction of die-casting machines, handling in sand casting and gravity casting, etc. (Please refer to Foundry Prime robots for washing applications or other similar applications). Special care must be taken in regard to operational and maintenance requirements for applications in foundry are as well as in other applications areas. Please contact ABB Robotics Sales organization if in doubt regarding specific application feasibility for the Foundry Plus 2 protected robot.

The robot is painted with two-component epoxy on top of a primer for corrosion protection. To further improve the corrosion protection additional rust preventive are applied to exposed and crucial areas, e.g. has the tool flange a special preventive coating. Although, continuous splashing of water or other similar rust formation fluids may cause rust attach on the robots unpainted areas, joints, or other unprotected surfaces. Under these circumstances it is recommended to add rust inhibitor to the fluid or take other measures to prevent potential rust formation on the mentioned.

The entire robot is IP67 compliant according to IEC 60529 - from base to wrist, which means that the electrical compartments are sealed against water and solid contaminants. Among other things all sensitive parts are better protected than the standard offer.

Selected Foundry Plus 2 features:

- Improved sealing to prevent penetration into cavities to secure IP67
- · Additional protection of cabling and electronics
- · Special covers that protect cavities
- · Well-proven connectors
- · Black chrome coated tool flange
- Rust preventives on screws, washers and unpainted/machined surfaces
- · Extended service and maintenance program

The Foundry Plus 2 robot can be cleaned with appropriate washing equipment according to the robot product manual. Appropriate cleaning and maintenance is

1.1.1 Introduction to structure Continued

required to maintain the protection, for example can rust preventive be washed off with wrong cleaning method.

#### Available robot versions

The option Foundry Plus 2 might not be available for all robot versions.

See *Specification of variants and options on page 57* for robot versions and other options not selectable together with Foundry Plus 2.

### **Operating system**

The robot is equipped with the OmniCore C30/C90XT and E10 controller and robot control software, RobotWare. RobotWare supports every aspect of the robot system, such as motion control, development and execution of application programs, communication etc. See *Operating manual - OmniCore*.

### Safety

The safety standards are valid for the complete robot, manipulator and controller.

#### **Additional functionality**

For additional functionality, the robot can be equipped with optional software for application support - for example gluing and welding, communication features - network communication - and advanced functions such as multitasking, sensor control etc. For a complete description on optional software, see *Product specification - OmniCore C line* and *Product specification - OmniCore E line*.

Posi- tion	Description	Posi- tion	Description
Α	Axis 1	В	Axis 2
С	Axis 3	D	Axis 4
E	Axis 5	F	Axis 6

1.1.2 The robot

# 1.1.2 The robot

#### General

The IRB 1200 is available in two versions and both can be mounted on floor, inverted or on wall in any angle (around X-axis or Y-axis).

Robot type	Handling capacity (kg)	Reach (m)
IRB 1200	5 kg	0.9 m
IRB 1200	7 kg	0.7 m

# Weight, robot

The table shows the weight of the robot.

Robot model	Weight
IRB 1200	IRB 1200-5/0.9: 54 kg
	IRB 1200-7/0.7: 52 kg

### Note

The weight does not include tools and other equipment fitted on the robot.

#### Other technical data

Data	Description	Note
Airborne noise level		< 70 dB (A) Leq (acc. to the working space Machinery directive 2006/42/EG)

# **Power consumption**

Type of movement Power consumption (kW)		
	IRB 1200-5/0.9	IRB 1200-7/0.7

1.2.1 Applicable standards

# 1.2 Standards

# 1.2.1 Applicable standards

# General

The product is compliant with ISO 10218-1:2011, *Robots for industrial environments - Safety requirements - Part 1 Robots*, and applicable parts in the normative references, as referred to from ISO 10218-1:2011. In case of deviation from ISO 10218-1:2011, these are listed in the declaration of incorporation. The declaration of incorporation is part of the delivery.

### **Robot standards**

Standard	Description
ISO 9283	Manipulating industrial robots – Performance criteria and related test methods
ISO 9787	Robots and robotic devices – Coordinate systems and motion nomenclatures
ISO 9946	Manipulating industrial robots – Presentation of characteristics

# Other standards used in design

Standard	Description
IEC 60204	Safety of machinery - Electrical equipment of machines - Part 1: General requirements, normative reference from ISO 10218-1
IEC 61000-6-2	Electromagnetic compatibility (EMC) – Part 6-2: Generic standards – Immunity standard for industrial environments
IEC 61000-6-4	Electromagnetic compatibility (EMC) – Part 6-4: Generic standards – Emission standard for industrial environments
ISO 13849-1:2006	Safety of machinery - Safety related parts of control systems - Part 1: General principles for design, normative reference from ISO 10218-1
IEC 61340-5-1	Protection of electronic devices from electrostatic phenomena - General requirements

# Region specific standards and regulations

Standard	Description
ANSI/RIA R15.06	Safety requirements for industrial robots and robot systems
ANSI/UL 1740	Safety standard for robots and robotic equipment
CAN/CSA Z 434-03	Industrial robots and robot Systems - General safety requirements
ANSI/ESD S20.20	Protection of Electrical and Electronic Parts, Assemblies and Equipment (Excluding Electrically Initiated Explosive Devices)
EN ISO 10218-1	Robots and robotic devices — Safety requirements for industrial robots — Part 1: Robots

# 1 Description

#### 1.3.1 Introduction to installation

# 1.3 Installation

# 1.3.1 Introduction to installation

# General

IRB 1200 is adapted for normal industrial environment. Depending on robot variant, an end effector with max. weight of 5 or 7 kg, including payload, can be mounted on the robot's mounting flange (axis 6). Other equipment, weighing a maximum of 0.3 kg, can be mounted on the upper arm. For more information about mounting of extra equipment, see *Fitting of equipment on page 34*.

1.3.2 Operating requirements

# 1.3.2 Operating requirements

#### Protection classes, robot

The table shows the available protection types of the robot, with the corresponding protection class.

Protection type	Protection class
Manipulator, protection type Standard	IP40 IP67 (option 3350-670, with Omni- Core controllers)
Manipulator, protection type Foundry Plus	IP67 (option 3352-10, with Omni- Core controllers)
Manipulator, protection type Clean Room	ISO Class 3 (option 3351-3, with OmniCore controllers)

#### **Explosive environments**

The robot must not be located or operated in an explosive environment.

#### Working range limitations

EPS will not be selectable. No mechanical limitation.

#### **Ambient temperature**

Description	Protection class	Temperature
Manipulator during operation	Standard	+ 5°C <sup>i</sup> (41°F) to + 45°C (113°F)
Manipulator with food grade lubrication or Hygienic during operation	Option	+ 5°C <sup>i</sup> (41°F) to + 35°C <sup>ii</sup> (113°F)
For the controller	Standard/Option	See Product specification - Omni- Core C line and Product specifica- tion - OmniCore E line.
Complete robot during transportation and storage	Standard	- 25°C (-13°F) to + 55°C (131°F)
For short periods (not exceeding 24 hours)	Standard	up to + 70°C (158°F)

i At low environmental temperature < 10°C is, as with any other machine, a warm-up phase recommended to be run with the robot. Otherwise there is a risk that the robot stops or run with lower performance due to temperature dependent oil and grease viscosity.

# Relative humidity

Description	Relative humidity
Complete robot during operation, transportation and storage	Max. 95% at constant temperature

ii For robots with food grade lubrication and Hygienic, if environment temperature > 35°C, contact ABB for further information.

#### 1.4.1 Introduction to load diagram

# 1.4 Load diagram

# 1.4.1 Introduction to load diagram

#### Information

#### WARNING

It is very important to always define correct actual load data and correct payload of the robot. Incorrect definitions of load data can result in overloading of the robot.

If incorrect load data is used, and/or if loads outside the load diagram are used, the following parts can be damaged due to overload:

- · motors
- gearboxes
- · mechanical structure

### **WARNING**

In RobotWare, the service routine LoadIdentify can be used to determine correct load parameters. The routine automatically defines the tool and the load.

See Operating manual - OmniCore, for detailed information.

#### **WARNING**

Robots running with incorrect load data and/or with loads outside the load diagram, will not be covered by robot warranty.

#### General

The load diagram includes a nominal pay load inertia,  $J_0$  of 0.06 kgm $^2$  and an extra load of 0.3 kg at the upper arm housing. At different moment of inertia the load diagram will be changed. For robots that are allowed tilted, wall or inverted mounted, the load diagrams as given are valid and thus it is also possible to use RobotLoad within those tilt and axis limits.

### Control of load case with RobotLoad

To verify a specific load case, use the RobotStudio add-in RobotLoad.

The result from RobotLoad is only valid within the maximum loads and tilt angles. There is no warning if the maximum permitted arm load is exceeded. For over-load cases and special applications, contact ABB for further analysis.

# 1.4.3 Maximum load and moment of inertia for axis 5

#### General

Total load given as: Mass in kg, center of gravity (Z and L) in m and moment of inertia ( $J_{ox}$ ,  $J_{oy}$ ,  $J_{ox}$ ) in kgm<sup>2</sup>. L=  $\sqrt{(\chi_2 + \chi_2)}$ .

# Full movement of Axis 5 (±130°)

Axis	Robot variant	Max. value
5	IRB 1200-7/0.7	$J_5$ = Mass x ((Z + 0.082) <sup>2</sup> + L <sup>2</sup> ) + max (J <sub>ox</sub> , J <sub>oy</sub> ) $\leq$ 0.45 kgm <sup>2</sup>
	IRB 1200-5/0.9	$J_5$ = Mass x ((Z + 0.082) <sup>2</sup> + L <sup>2</sup> ) + max (J <sub>ox</sub> , J <sub>oy</sub> ) $\leq$ 0.45 kgm <sup>2</sup>
6	IRB 1200-7/0.7	$J_6$ = Mass x L <sup>2</sup> + $J_{0Z} \le 0.2 \text{ kgm}^2$
	IRB 1200-5/0.9	$J_6$ = Mass x L <sup>2</sup> + $J_{0Z} \le 0.2 \text{ kgm}^2$

xx1400000342

Position	Description	
Α	Center of gravity	
$J_{ox}$ , $J_{oy}$ , $J_{oz}$	Max. moment of inertia around the X, Y and Z axes at center of gravity.	

# Limited axis 5, center line down

Axis	Robot variant	Max. value	
5	IRB 1200-7/0.7	$J_5 = Mass x ((Z + 0.082)^2 + L^2) + max (J_{ox}, J_{oy}) \le 0.45 \text{ kgm}^2$	
	IRB 1200-5/0.9	$J_5 = Mass x ((Z + 0.082)^2 + L^2) + max (J_{ox}, J_{oy}) \le 0.45 \text{ kgm}^2$	
6	IRB 1200-7/0.7	$J_6$ = Mass x L <sup>2</sup> + $J_{0Z} \le 0.2 \text{ kgm}^2$	
	IRB 1200-5/0.9	$J_6$ = Mass x L <sup>2</sup> + $J_{0Z} \le 0.2 \text{ kgm}^2$	

# 1.4.3 Maximum load and moment of inertia for axis 5 *Continued*

xx1400000343

Pos	Description	
Α	Center of gravity	
$J_{ox}$ , $J_{oy}$ , $J_{oz}$	Max. moment of inertia around the X, Y and Z axes at center of gravity.	

# Wrist torque

The table below shows the maximum permissible torque due to payload.

#### Note

The values are for reference only, and should not be used for calculating permitted load offset (position of center of gravity) within the load diagram, since those also are limited by main axes torques as well as dynamic loads. Also arm loads will influence the permitted load diagram, contact your local ABB organization.

Robot variant	Max wrist torque axis 4 and 5	Max wrist torque axis 6	Max torque valid at load
IRB 1200-7/0.7	12.5 Nm	6.2 Nm	7 kg
IRB 1200-5/0.9	8.9 Nm	4.4 Nm	5 kg

1.4.3.1 Maximum TCP acceleration

# 1.4.3.1 Maximum TCP acceleration

#### General

Higher values can be reached with lower loads than the nominal because of our dynamical motion control QuickMove2. For specific values in the unique customer cycle, or for robots not listed in the table below, we recommend then to use RobotStudio.

### Maximum Cartesian design acceleration for nominal loads

Robot type	Max acceleration at nominal load	Controlled Motion  Max acceleration at nominal load  COG [m/s <sup>2</sup> ]
IRB 1200-7/0.7	88	68
IRB 1200-5/0.9	94	79

# Note

Acceleration levels for emergency stop and controlled motion includes acceleration due to gravitational forces. Nominal load is defined with nominal mass and cog with max offset in Z and L (see the load diagram).

# 1.5.1 Introduction to fitting of equipment

# 1.5 Fitting of equipment

# 1.5.1 Introduction to fitting of equipment

# General

Extra loads can be mounted on to the upper arm. Definitions of load area and permitted load are shown in figure below. The center of gravity of the extra load shall be within the marked load areas. The robot is supplied with holes for fitting of extra equipment. (See *Holes for fitting extra equipment on page 35*).

### xx1300000384

When fitting tools on the tool flange, only use screws with quality 12.9. For other equipment use suitable screws and tightening torque for your application.

#### 1.6.1 Calibration methods

## 1.6 Calibration

## 1.6.1 Calibration methods

#### Overview

This section specifies the different types of calibration and the calibration methods that are supplied by ABB.

The original calibration data delivered with the robot is generated when the robot is floor mounted. If the robot is not floor mounted, then the robot accuracy could be affected. The robot needs to be calibrated after it is mounted.

More information is available in the product manual.

## Types of calibration

Type of calibration	Description	Calibration method
Standard calibration	The calibrated robot is positioned at calibration position.	Axis Calibration or manual calibration i
	Standard calibration data is found on the SMB (serial measurement board) or EIB in the robot.	
Absolute accuracy calibration (optional)	Based on standard calibration, and besides positioning the robot at synchronization position, the Absolute accuracy calibration also compensates for:  • Mechanical tolerances in the robot structure	CalibWare
	Deflection due to load	
	Absolute accuracy calibration focuses on positioning accuracy in the Cartesian coordinate system for the robot.	
	Absolute accuracy calibration data is found on the SMB (serial measurement board) in the robot.	
	A robot calibrated with Absolute accuracy has the option information printed on its name plate.	
	To regain 100% Absolute accuracy performance, the robot must be recalibrated for absolute accuracy after repair or maintenance that affects the mechanical structure.	
Optimization	Optimization of TCP reorientation performance. The purpose is to improve reorientation accuracy for continuous processes like welding and gluing.	Wrist Optimization
	Wrist optimization will update standard calibration data for axes 4 and 5.	

The robot is calibrated by either manual calibration or Axis Calibration at factory. Always use the same calibration method as used at the factory.

Information about valid calibration method is found on the calibration label or in the calibration menu on the FlexPendant.

If no data is found related to standard calibration, manual calibration is used as default.

1.6.1 Calibration methods Continued

#### **Brief description of calibration methods**

#### Axis Calibration method

Axis Calibration is a standard calibration method for calibration of IRB 1200. It is the recommended method in order to achieve proper performance.

The following routines are available for the Axis Calibration method:

- · Fine calibration
- · Update revolution counters
- Reference calibration

The calibration equipment for Axis Calibration is delivered as a toolkit.

The actual instructions of how to perform the calibration procedure and what to do at each step is given on the FlexPendant. You will be guided through the calibration procedure, step by step.

#### Wrist Optimization method

Wrist Optimization is a method for improving reorientation accuracy for continuous processes like welding and gluing and is a complement to the standard calibration method.

The following routines are available for the Wrist Optimization method:

· Wrist Optimization

The actual instructions of how to perform the calibration procedure and what to do at each step is given on the FlexPendant. You will be guided through the calibration procedure, step by step.

#### Manual calibration method

With the manual calibration method, the robot's axes are positioned in specific calibration positions using calibration tools. Under this condition, the position of the axis to be calibrated is pre-determined. The axes must be calibrated one at a time.

#### CalibWare - Absolute Accuracy calibration

The CalibWare tool guides through the calibration process and calculates new compensation parameters. This is further detailed in the *Application manual - CalibWare Field*.

If a service operation is done to a robot with the option Absolute Accuracy, a new absolute accuracy calibration is required in order to establish full performance. For most cases after replacements that do not include taking apart the robot structure, standard calibration is sufficient.

The Absolute Accuracy option varies according to the robot mounting position. This is printed on the robot name plate for each robot. The robot must be in the correct mounting position when it is recalibrated for absolute accuracy.

1.6.2 Fine calibration

## 1.6.2 Fine calibration

#### General

Fine calibration is made by moving the axes to a fixed position on the frame. For detailed information on calibration of the robot see *Product manual - IRB 1200*.

xx1300000365

Posi- tion	Description	Posi- tion	Description
Α	Axis 1	В	Axis 2
С	Axis 3	D	Axis 4
E	Axis 5	F	Axis 6

## 1.6.3 Absolute Accuracy calibration

#### **Purpose**

Absolute Accuracy is a calibration concept that improves TCP accuracy. The difference between an ideal robot and a real robot can be several millimeters, resulting from mechanical tolerances and deflection in the robot structure. Absolute Accuracy compensates for these differences.

Here are some examples of when this accuracy is important:

- · Exchangeability of robots
- · Offline programming with no or minimum touch-up
- · Online programming with accurate movement and reorientation of tool
- Programming with accurate offset movement in relation to eg. vision system or offset programming
- · Re-use of programs between applications

The option *Absolute Accuracy* is integrated in the controller algorithms and does not need external equipment or calculation.

#### Note

The performance data is applicable to the corresponding RobotWare version of the individual robot.

## What is included

Every Absolute Accuracy robot is delivered with:

- · compensation parameters saved on the robot's serial measurement board
- a birth certificate representing the *Absolute Accuracy* measurement protocol for the calibration and verification sequence.

## 1.6.3 Absolute Accuracy calibration Continued

A robot with *Absolute Accuracy* calibration has a label with this information on the manipulator.

Absolute Accuracy supports floor mounted, wall mounted and ceiling mounted installations. Compensation parameters saved in the robot's serial measurement board differ depending on which Absolute Accuracy option is selected.

#### When is Absolute Accuracy being used

Absolute Accuracy works on a robot target in Cartesian coordinates, not on the individual joints. Therefore, joint based movements (e.g. MoveAbsJ) will not be affected.

If the robot is inverted, the Absolute Accuracy calibration must be performed when the robot is inverted.

#### **Absolute Accuracy active**

Absolute Accuracy will be active in the following cases:

- Any motion function based on robtargets (e.g. Movel) and ModPos on robtargets
- · Reorientation jogging
- · Linear jogging
- Tool definition (4, 5, 6 point tool definition, room fixed TCP, stationary tool)
- · Work object definition

#### Absolute Accuracy not active

The following are examples of when Absolute Accuracy is not active:

- Any motion function based on a jointtarget (MoveAbsJ)
- · Independent joint
- · Joint based jogging
- · Additional axes
- Track motion

## Note

In a robot system with, for example, an additional axis or track motion, the Absolute Accuracy is active for the manipulator but not for the additional axis or track motion.

#### **RAPID** instructions

There are no RAPID instructions included in this option.

#### **Production data**

Typical production data regarding calibration are:

Robot	Positioning accuracy (mm)			
	Average	Max	% Within 1 mm	
IRB1200-7/0.7	0.13	0.30	100	
IRB1200-5/0.9	0.14	0.45	100	

1.7.1 Introduction to maintenance and trouble shooting

## 1.7 Maintenance and troubleshooting

## 1.7.1 Introduction to maintenance and trouble shooting

## General

The robot requires only a minimum of maintenance during operation. It has been designed to make it as easy to service as possible:

- Maintenance-free AC motors are used.
- · Grease used for all gearboxes.
- The cabling is routed for longevity, and in the unlikely event of a failure, its modular design makes it easy to change.

#### **Maintenance**

The maintenance intervals depend on the use of the robot, the required maintenance activities also depends on selected options. For detailed information on maintenance procedures, see *Maintenance* section in the *Product Manual - IRB 1200*.

## 1.8.1 Working range and type of motion

## 1.8 Robot motion

## 1.8.1 Working range and type of motion

## **Robot motion**

Location of motion	Type of motion	IRB 1200-7/0.7	IRB 1200-5/0.9
Axis 1	Rotation motion	+170° to -170°	+170° to -170°
Axis 2	Arm motion	+135° to -100°	+130° to -100°
Axis 3	Arm motion	+70° to -200°	+70° to -200°
Axis 4	Wrist motion	+270° to -270°	+270° to -270°
Axis 5	Bend motion	±130° (not Hygienic robots) ±128° (Hygienic robots)	±130°
Axis 6	Turn motion	Default: +400° to -400° Maximum revolution: ±242 i	Default: +400° to -400° Maximum revolution: ±242

The default working range for axis 6 can be extended by changing parameter values in the software. Option Independent axis can be used for resetting the revolution counter after the axis has been rotated (no need for "rewinding" the axis).

## Working range

## 1.8.2 Performance according to ISO 9283

#### General

At rated maximum load, maximum offset and 1.6 m/s velocity on the inclined ISO test plane, with all six axes in motion. Values in the table below are the average result of measurements on a small number of robots. The result may differ depending on where in the working range the robot is positioning, velocity, arm configuration, from which direction the position is approached, the load direction of the arm system. Backlashes in gearboxes also affect the result.

The figures for AP, RP, AT and RT are measured according to figure below.

xx0800000424

Position	Description	Position	Description
Α	Programmed position	E	Programmed path
В	Mean position at program execution	D	Actual path at program execution
AP	Mean distance from pro- grammed position	AT	Max deviation from E to average path
RP	Tolerance of position B at repeated positioning	RT	Tolerance of the path at repeated program execution

Description	Values		
	IRB 1200 - 5/0.9	IRB 1200-7/0.7	
Pose repeatability, RP (mm)	0.025	0.02	
Pose accuracy, AP (mm)	0.02	0.02	
Linear path repeatability, RT (mm)	0.07	0.02	
Linear path accuracy, AT (mm)	0.53	0.77	
Pose stabilization time, Pst (s) within 0.1 mm of the position	0.113	0.057	

1.8.3 Velocity

#### 3-phase power supply

Axis number	IRB 1200-5/0.9	IRB 1200-7/0.7	With Hygienic option
1	288°/s	288°/s	280°/s
2	240°/s	240°/s	230°/s
3	297°/s	297°/s	290°/s
4	400°/s	400°/s	380°/s
5	405°/s	405°/s	380°/s
6	600°/s	600°/s	600°/s

#### 1-phase power supply

When the robot uses a single phase power supply, like with OmniCore controller, the performance regarding max axis speed is reduced, see table below. The reduced top speed can be increased if the power supply minimum voltage is higher than the default setting 187 V (220x0.85). See the system parameter *Mains tolerance min*, in *Technical reference manual - System parameters*.

Note that the robot acceleration is not affected by the single phase power supply. The cycle time may not be affected at all. RobotStudio can be used to test the cycle. The parameter *Mains tolerance min* can also be modified in RobotStudio.

Axis number	IRB 1200-5/0.9	IRB 1200-7/0.7	With Hygienic option
1	288°/s	288°/s	280°/s
2	240°/s	240°/s	230°/s
3	297°/s	297°/s	290°/s
4	376°/s	378°/s	380°/s
5	399°/s	405°/s	380°/s
6	600°/s	600°/s	600°/s

1.8.4 Robot stopping distances and times

## 1.8.4 Robot stopping distances and times

## Introduction

The stopping distances and times for category 0 and category 1 stops, as required by EN ISO 10218-1 Annex B, are listed in *Product specification - Robot stopping distances according to ISO 10218-1 (3HAC048645-001)*.

#### 1.9 Customer connections

#### 1.9 Customer connections

#### Introduction to customer connections

The cables for customer connection are integrated in the robot and the connectors are placed on the tubular housing (upper arm) and one at the base. There is one connector R4.CP/CS at the tubular housing. Corresponding connector R1.CP/CS is located at the base.

It is recommended to use a fuse protector for customer connection; otherwise, application overload will burn out the CP/CS cables in the robot. Detailed information about the CP/CS connection is provided in a warning label on the tubular housing.

xx1600001687

There is also connections for Ethernet, one connector R4.Ethernet at the tubular housing and the corresponding connector R1.Ethernet located at the base.

1.9 Customer connections Continued

Hose for compressed air is also integrated into the manipulator. There are 4 inlets at the base (R1/8") and 4 outlets (M5) on the tubular housing.

xx1300000385

Position	Connection	Description	Number	Value
Α	(R1)R4.CP/CS	Customer power/signal	10	49 V, 500 mA
В	Air	Max. 5 bar	4	Outer diameter of air hose: 4 mm
С	(R1)R4.Ethernet	Customer Ethernet	8	100/10 Base-TX

## **Connectors**

The tables describes the connectors on base and tubular housing (upper arm).

## Connectors, base

Position	Description	Art. no.
Robot	Pin connector 10p, bulkhead	3HAC022117-002
Customer connector	Connector set R1.CP/CS	3HAC037038-001

## Connectors, tubular housing

Position	Description	Art. no.
Robot	Socket connector 10p, flange mounted	3HAC023624-002
Customer connector	Connector set R3.CP/CS	3HAC037070-001

## 1 Description

# 1.9 Customer connections *Continued*

## Air, connector

Position	Description	Art. no.
Robot	4xM5	
Customer cable	Air connector	3HAC032049-001

2.1 Introduction to variants and options

## 2 Specification of variants and options

## 2.1 Introduction to variants and options

#### General

The different variants and options for the IRB 1200 are described in the following sections. The same option numbers are used here as in the specification form.

The variants and options related to the robot controller are described in the product specification for the controller.

#### 2.2 Manipulator

## 2.2 Manipulator

#### **Manipulator variants**

Option	Туре	Handling capacity (kg)	Reach (m)
3300-54	IRB 1200	7	0.7
3300-55	IRB 1200	5	0.9

#### **Manipulator color**

Option	Description
209-2	ABB white standard
209-202	ABB Graphite White standard

#### **Manipulator protection**

Option	Description
3350-400	Base 40,IP40
3350-670	Base 67,IP67
3351-3	Clean Room 3
3352-10	Foundry Plus2 67, IP67
3353-1	Hygiene 67, REQUIRES: Under the base [3309-1], and Food Grade Lubrication [3310-1]

## Note

Base 40 includes IP40, according to standard IEC 60529.

Base 67 includes IP67, according to standard IEC 60529.

Clean Room class 3 includes ISO class 3 standard, according to DIN EN ISO 14644-1, -14.

#### Foundry Plus 2 [3352-10]

ABB Foundry Plus 2 makes your entire robot IP67 compliant, from base to wrist meaning that the electrical compartments are sealed against liquid and solid contaminants. But it takes more than IP67 to ensure long-term trouble-free operation and long service life.

ABB Foundry Plus 2 robots are unique due to their improved resistance to corrosion and capability to withstand high pressure steam washing. No other foundry robots are up to this task today. See *Protection type Foundry Plus 2 on page 10* for a complete description.

#### Food grade lubrication

Option	Description
3310-1	Food Graded NSF H1, REQUIRES: Hygienic [3353-1]

2.2 Manipulator Continued

## **Robot cabling routing**

Option	Description
3309-1	Under the base
3309-2	From side of base

## **Media & Communication**

When 3303-1 Parallel & Air is selected then 3304-1 and 3305-1 options are activated for selecting.

When 3303-2 Ethernet, Parallel, Air is selected then 3304-1,3305-1,3306-1 and 3307-1 are activated for selecting.

Option	Туре	Description
3303-1	Parallel & Air	Includes customer power CP and customer signals CS + air.
3303-2	Ethernet, Parallel, Air	Includes CP, CS + air + Ethernet (PROFINET).

#### **Connector kits base**

Option	Description
3330-2	CP/CS bus, Proc 1 base

## Connector kits Upper arm

Option	Description
3336-1	Upper arm

2.2 Manipulator Continued

## Warranty

For the selected period of time, ABB will provide spare parts and labour to repair or replace the non-conforming portion of the equipment without additional charges. During that period, it is required to have a yearly Preventative Maintenance according to ABB manuals to be performed by ABB. If due to customer restrains no data can be analyzed in the ABB Ability service *Condition Monitoring & Diagnostics* for robots with OmniCore controllers, and ABB has to travel to site, travel expenses are not covered. The Extended Warranty period always starts on the day of warranty expiration. Warranty Conditions apply as defined in the Terms & Conditions.

#### Note

This description above is not applicable for option Stock warranty [438-8]

Option	Туре	Description
438-1	Standard warranty	Standard warranty is 12 months from <i>Customer Delivery Date</i> or latest 18 months after <i>Factory Shipment Date</i> , whichever occurs first. Warranty terms and conditions apply.
438-2	Standard warranty + 12 months	Standard warranty extended with 12 months from end date of the standard warranty. Warranty terms and conditions apply. Contact Customer Service in case of other requirements.
438-4	Standard warranty + 18 months	Standard warranty extended with 18 months from end date of the standard warranty. Warranty terms and conditions apply. Contact Customer Service in case of other requirements.
438-5	Standard warranty + 24 months	Standard warranty extended with 24 months from end date of the standard warranty. Warranty terms and conditions apply. Contact Customer Service in case of other requirements.
438-6	Standard warranty + 6 months	Standard warranty extended with 6 months from end date of the standard warranty. Warranty terms and conditions apply.
438-7	Standard warranty + 30 months	Standard warranty extended with 30 months from end date of the standard warranty. Warranty terms and conditions apply.
438-8	Stock warranty	Maximum 6 months postponed start of standard warranty, starting from factory shipment date. Note that no claims will be accepted for warranties that occurred before the end of stock warranty. Standard warranty commences automatically after 6 months from <i>Factory Shipment Date</i> or from activation date of standard warranty in WebConfig.
		Note
		Special conditions are applicable, see <i>Robotics Warranty Directives</i> .

2.3 Floor cables

## 2.3 Floor cables

## Manipulator cable - Straight

Option	Lengths
3200-1	3 m
3200-2	7 m
3200-3	15 m

## Connection of parallell communication

Required 3303-1 Parallel & Air or 3303-2 Ethernet, Parallel, Air.

Option	Lengths
3201-1	3 m
3201-2	7 m
3201-3	15 m

## **Connection of Ethernet**

Required 3303-2 Ethernet, Parallel, Air and occupies 1 Ethernet port.

Option	Lengths
3202-2	7 m
3202-3	15 m

## 3 Accessories

#### General

There is a range of tools and equipment available.

## Basic software and software options for robot and PC

For more information, see Application manual - Controller software OmniCore, Product specification - OmniCore C line and Product specification - OmniCore E line.
